Caddie Educational

Caddie Educational
More than just a CAD system

Caddie Educational is available to all students and Educational Institutes providing that it is not used for commercial purposes, and that they have signed a 'Caddie Educational Licence Agreement'

Caddie Educational provides the user with the functionality enjoyed by Caddie Professional users the world over, making drawing and 3D modelling easy, but at the vastly reduced rate of only £70 per licence. Users can take advantage of Caddie's unique blend of user friendly interface and powerful discipline related tools, producing drawings with an ease and speed that can save hours over manual drafting or drawing with other CAD packages.

The list below highlights just some of the benefits available to students using Caddie Educational; benefits that can mean more time spent designing, and less time drawing.

'.DWG' Drawing format
Caddie uses the '.DWG' format as its native drawing format. This ensures that drawings created in Caddie can be loaded by other '.DWG' based CAD systems with no import or export required. Furthermore Caddie can directly open 2D and 3D drawings and symbol libraries widely available from manufacturers and suppliers with no loss of integrity.

UK Architectural Application
Giving you access to a whole range of quick architectural tools for creating plans, sections, elevations and 3D models of your designs; triangulation commands for drafting surveys; tools for creating roads; generating meshes from point height data such as provided by Promap®; drawing and presentation tools that let you make your drawings look hand drawn, and scheduling for your electrical layouts.

Civil Application
Includes tools to make designing service layouts, utilities, drainage and fences, quick and easy. The Civil Application will even add vehicle turning paths to aid in the design of road layouts and service yards.

Survey Application
Makes light work of entering, interrogating and drafting survey information from site data and surveys, with tools for the creation of transition curves built in too.

Steel Application
Includes BS steel sections, simply select the profile and weight then place in your drawing; as well as steel staircases and trusses.

Mechanical Application
With a broad range of mechanical engineering symbols such as machining levels and datum. The application covers everything from nuts and bolts to pipes and diodes.

Caddie Symbol and Block Libraries
Giving you instant access to a comprehensive range of symbols encompassing everything from doors and windows through sanitary ware and lintels to trees, people and cars.

Caddie VIO Photorealistic Rendering
Produce stunning quality 3D renders and animations of your designs quickly and easily with Caddie VIO, the integrated photo-realistic rendering application for Caddie.

Caddie Student Licence (single licence)	**£70**
Caddie Educational (10 user licence)	**£200**
Caddie Educational (50 user licence)	**£500**

also available:

Caddie Professional (1st Seat)	**£1,845**
Caddie Budget	**£695**

Please note:
Student Licences of Caddie are issued by download only, with a PDF version of the Caddie manual

All prices exclusive of delivery & VAT as applicable

The Features Caddie provides:

- **Industry standard '.DWG' drawing format**

- **Architectural, Steelwork, Surveying, Civil & Mechanical Tools**

- **Insert photographs and images in your drawings**

- **Block creation, insertion and editing**

- **Opaques to mask areas of drawings**

- **Automatic Hatching with island creation and origin editing**

- **RGB Hatch and Gradient Fills**

- **Artistic Tools for 'Hand' finishing drawings**

- **Multiple Sheets & scaled viewports from a single model**

- **Individual pen configurations for each Viewport**

- **Automatic scale sensitive detailing**

- **3D modelling, walkthroughs and live image textures**

- **Simple to learn & easy to use**

- **Professional training & support**

The Benefits you see:

Providing easy compatibility with fellow professionals, clients and manufacturers

Save time and increase productivity with Caddie's specialist tools

Save time creating location plans, street scenes, and illustrative details

Simplify drawings to improve efficiency; and make major alterations and amendments in a matter of seconds

Simply move objects around, hiding whatever's underneath. Brilliant for elevations, site and space planning

Save time hatching with automatic boundary recognition.

Give your presentation the edge by adding colour to your drawings, Caddie even lets you fade and grade colours across your drawing

Create drawings that reflect your own character and style of presentation, including Artistic tools to provide that hand-drawn look

Reduce drawing time and minimize errors by creating and amending a single drawing model. Take the view you want at the scales you need and arrange them on your drawing sheets

Caddie banishes flat, lifeless CAD drawings forever by letting you choose an independent pen configuration for each of your chosen views. Choose thinner 'pens' for smaller scale work, thicker 'pens' for details, even add colour to some views and not others, and all on the same drawing sheet

Caddie's Relevant Detailing lets you choose the level of detail shown according to the scale of your view. Alter the scale and watch the level of detail change automatically

Don't limit your imagination, model your ideas In three dimensions, bringing your schemes to life. Walk through your designs complete with the textures and finishes you have chosen, bricks, tiles, wood, glass, even actual wallpaper, to add to the sense of realism

The easy to use menu structure coupled to powerful and intuitive context sensitive tool options make the change to Caddie easy and productive, saving you both time and money.

Training courses that teach you what you want to know as well as what you need to know, and in terms you can understand. With professional yet friendly support to get you working effectively
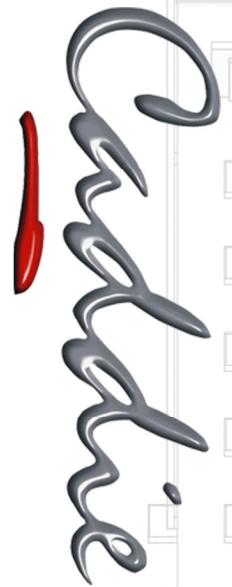

'Your Caddie software has revolutionised the way we work - we produce far better drawings much more quickly – should have changed years ago.' Geoffrey Blumenthal

Features & Benefits

Caddie Educational

CADDIE EDUCATIONAL LICENCE AGREEMENT

A Caddie Student licence is a time limited licence to use Caddie for educational purposes only.

Term of licence
If the licence is assigned to a registered student, the licence is valid for as long as the student is in full time, or part time education, however the licence will require re-activating every 12 months.
If the licence is assigned to a company or organisation for use by a registered student (or students), the licence is valid for 12 months.

Restrictions on use
The student licence may only be used for educational purposes. It does not permit the use of Caddie for commercial, professional or for-profit purposes.
Portability
The student licence will be licensed on 1 (one) computer. The licence cannot be transferred without re-activation. The licence is a software licence and will be destroyed if the hard disk of the computer is reformatted. The licence will require re-activating should this occur.

Activation
The student licence requires an internet connection or email facility for activation. A student licence activation is valid for 12 months or until the student finishes full or part time education whichever is the shorter. The licence includes a maximum of 4 (four) activations. Should additional activations be required these will have to be purchased at the current published price at the time. The inclusion of 4 activations allows for a student licence to run for a maximum of 4 years with no further payment. Alternatively, should the registered user decide to reformat their disk, or change their computer on which the licence is activated, some of the allowed 4 activations will be required for continued use. Should either of these situations occur and the student remains in full or part time education beyond the 12 month life of the 4th activation, the student will be required to purchase additional activations to obtain the full term of the licence.

Restrictions on software
A student licence has the functionality of a full Caddie Professional licence including Caddie Vio, photo-realistic rendering. However drawings created in a student licence will always plot with a border stating that the drawing is an educational drawing. If any part of an educational drawing (including symbols, blocks, etc.) is imported or merged with a non-educational drawing, that non educational drawing will immediately become an educational drawing and will plot with an educational border thereafter. A commercial version of Caddie will warn the user, if they attempt to merge any part of an educational drawing into a commercial drawing. If the user ignores the warning and continues to import the educational drawing, then that process is not reversible.
