# **Caddie Educational**

## CADDIE EDUCATIONAL LICENCE AGREEMENT

A Caddie Student licence is a time limited licence to use Caddie for educational purposes only.

### Term of licence

If the licence is assigned to a registered student, the licence is valid for as long as the student is in full time, or part time education, however the licence will require re-activating every 12 months.

If the licence is assigned to a company or organisation for use by a registered student (or students), the licence is valid for 12 months.

### Restrictions on use

The student licence may only be used for educational purposes. It does not permit the use of Caddie for commercial, professional or for-profit purposes.

Portability

The student licence will be licensed on 1 (one) computer. The licence cannot be transferred without reactivation. The licence is a software licence and will be destroyed if the hard disk of the computer is reformatted. The licence will require re-activating should this occur.

### **Activation**

The student licence requires an internet connection or email facility for activation. A student licence activation is valid for 12 months or until the student finishes full or part time education whichever is the shorter. The licence includes a maximum of 4 (four) activations. Should additional activations be required these will have to be purchased at the current published price at the time. The inclusion of 4 activations allows for a student licence to run for a maximum of 4 years with no further payment. Alternatively, should the registered user decide to reformat their disk, or change their computer on which the licence is activated, some of the allowed 4 activations will be required for continued use. Should either of these situations occur and the student remains in full or part time education beyond the 12 month life of the 4th activation, the student will be required to purchase additional activations to obtain the full term of the licence.

A student licence has the functionality of a full Caddie Professional licence including Caddie Vio, photo- realistic rendering. However drawings created in a student licence will always plot with a border stating that the drawing is an educational drawing. If any part of an educational drawing (including symbols, blocks, etc.) is imported or merged with a non-educational drawing, that non educational drawing will immediately be- come an educational drawing and will plot with an educational border thereafter. A commercial version of Caddie will warn the user, if they attempt to merge any part of an educational drawing, then that process is not reversible.
